

## **“The unique design of the Flexim-21 simplifies our operation and maximizes our efficiency”**

Maison Mensez is specialised in the production of parbaked frozen bread and has customers all over Europe.

Mr. Mensez, General Director at Maison Mensez, commented: “As we continuously invest in the efficiency of our product and packaging quality, we decided to renew our parbaked frozen bread packaging lines with a new case erector and bag inserter.”

“For the bag inserting process, we’ve compared two different technologies: the bag inserter, using pre-made bags and the bagmaker inserter, which automatically converts rolls of polyethylene film into made-to-measure bags.”

“After testing, we’ve selected the innovative Flexim-21 bagmaker inserter, because of the many advantages the machine offers compared to a bag inserter, using pre-made bags.”

### **“With the Flexim-21 we’ve cut down our bag cost”**

“The Flexim-21 bagmaker inserter offers a perfectly adjusted bag length, which minimizes our film consumption. The machine also uses the parent rolls produced by the film extruder and uses less PE film than comparable bag-in-box machines.”

### **“We renewed our packaging process with the latest bag-in-box technology”**

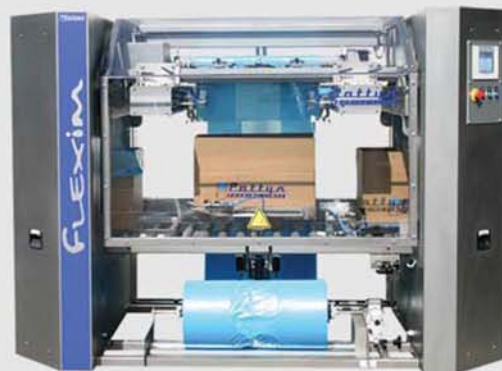

“Because of the high production speed of the Flexim-21, we handle more products in a shorter period and benefit from a trouble-free case lining process.”

### **“With the unique design of the Flexim-21 we simplified our operation and maximized our efficiency”**

“Thanks to the standard touch panel, quick case format change and easy access to the machine our operators experience every day the convenience of operating the Flexim-21.”

“In the near future we will gradually renew our packaging lines with a new Pattyn case erector and Flexim-21 bagmaker inserter.”

Mr. Mensez, General Director

FLEXIM-21 bagmaker inserter

Stay up to date with the latest innovations in case lining.
